IT Products

Single Sign-On

Single Sign-On frees people from password chains. A single set of credentials gives them access to enterprise applications in the cloud, on the web, and on mobile devices.

Provisioning

Provisioning lets IT leaders and administrators automate user onboarding and offboarding, with seamless communication between directories and cloud applications.

Universal Directory

Universal Directory is a flexible, cloud-based user store that lets IT administrators customize, organize, and manage any set of user attributes across all applications.

Mobility Management

Okta's mobility management system puts user identities at the center, securing mobile access while ensuring top-shelf user experience. By combining mobility and identity management, we're able to solve many more problems than traditional enterprise mobility management systems can.

Adaptive Multifactor Authentication

Adaptive MFA allows customers to further secure their applications and on-prem resources with a powerful policy framework, a comprehensive set of verification factors, and adaptive risk-based authentication.

Platform

Universal Directory

User identities live in a lot of different places. With Okta's Universal Directory, product developers can create a centralized view of every user, wherever they're mastered. It saves time and helps teams focus on making killer products.

Federated Single Sign-On

If a product connects several applications together but requires people to authenticate every time they jump into a new section, it loses major UX points. With Okta's Federated Single Sign-On, users can click once to sign in to everything.

Provisioning

Provisioning automates the process of creating user accounts within a product and revoking access when an account is canceled. Product teams can use Okta's pre-built connectors or write their own to create cross-application experiences that are more secure, more intuitive, and more delightful.

Adaptive Multifactor Authentication

Product teams need to secure their applications. Users need hassle-free usability. Adaptive MFA adds an extra layer of protection that flexes according to users' needs.

Social Authentication

Secure, scalable, and highly available authentication and user management for any application.

Drivetrain

The drivetrain that Okta runs on includes several built-in capabilities that make identity and mobility management even more powerful.

OAN

The Okta Application Network is a catalog of the industry's broadest and deepest integrations with crucial enterprise applications. Customers get simple, secure access to thousands of applications—and can even add their own.

Reporting

Instant access records and usage data help customers make smarter decisions about provisioning and security. Okta tells administrators whether people are adopting the system, and whether past employees can still get into enterprise resources. Okta maintains a comprehensive, analyzable log of events across all of a company's integrated applications.

Policy Engine

Okta's Policy Engine lets IT create identity management policies and additional security measures. Customers will get different policy capabilities depending on what products they buy, but the Policy Engine lets them manage every policy in one place.

Security AND Productivity

Customers love Okta because it's a modern security product and a productivity tool that people use every day. Millions of people use Okta to instantly connect to the tools and information they need to do their most important work, while IT leaders rest easy with the assurance that those connections are trusted and secure.

Come for the security, stay for the experience.

About Okta

Okta is the foundation for secure connections between people and technology. By harnessing the power of the cloud, Okta allows people to access applications on any device at any time, while still enforcing strong security protections. It integrates directly with an organization's existing directories and identity systems, as well as 4,000+ applications.

Because Okta runs on an integrated platform, organizations can implement the service quickly at large scale and low total cost.

Thousands of customers, including Adobe, Allergan, Chiquita, LinkedIn, and Western Union, trust Okta to help their organizations work faster, boost revenue, and stay secure.
